

Role of ICTs and Emerging Media in Addressing Climate Change Challenges

The session is intended to highlight the role of information and communication technologies in facilitating development processes, and also the relevance of traditional and emerging media in this regard.

This understanding – to be substantiated with discussions of current advocacy strands and existing and proposed initiatives in the area of ICT4D – is to be extended to the exploration of the role of information and communication technologies and emerging media in addressing climate change challenges. Identification of opportunities for the use of such technologies and media, and recommendations for future effort are some of the desired outcomes of the session
